AI solutions architect and CTO with eleven years in software and ML, the last six designing, building and running AI products end to end. CTO at AskCodi and MakersClaw, and CTO at Papersafe through its acquisition. I architect multi-provider AI platforms, agents and retrieval systems, run them on AWS and GKE with evaluations and observability built in, and lead and mentor the engineers who ship them.

EXPERIENCE

CTO, AskCodi — Apr 2022 – now

- Lead product strategy and technical execution; scaled the platform to 450K+ accounts and 90K+ workspaces.
- $250K gross in a two-month AppSumo launch, then moved to recurring subscriptions
- Architected a FastAPI gateway that puts OpenAI, Anthropic, Gemini, xAI and Fireworks behind one OpenAI-compatible endpoint, with SSE streaming, token budgets, Redis caching and rate limiting

CTO, MakersClaw — Apr 2025 – now

- Co-founded and lead product and engineering; #3 Product of the Day on Product Hunt.
- Designed the deployment platform: isolated runtime pods, expandable persistent storage, prepaid per-tool-call metering
- Shared memory across the whole workspace and agent pool in the orchestration architecture

CTO, Papersafe — Nov 2025 – Jun 2026

- Designed and built the document intelligence platform end to end, through to its acquisition by a law firm.
- Source-grounded RAG that cites the exact PDF page for every extracted value
- Low-confidence results routed to a spreadsheet-style human review interface

Co-founder, Bhansali Sharma GbR — Apr 2021 – Apr 2022

- Led an AI multi-ball tracking system for golf from client requirements and research to deployment, translating client discussions into production-ready solutions.

Working Student, Viewlicity GmbH (PuttView) — Aug 2019 – Mar 2021

- Owned backend development for PuttView and green book products (Unity, C#, SQL Server, Node.js).
- Led the automation of camera calibration, cutting processing time from two days to 15 minutes.
- Designed an LSTM-CNN model for time-series pose estimation.

Working Student, Basler AG — Jun 2018 – Aug 2019

- Built a Python validation framework for GigE machine-vision cameras and moved testing onto a test farm in a CI/CD pipeline.

Software Engineer, Nucleus Software Exports — Jun 2015 – Aug 2017

- Engineered cloud-based web and mobile modules for the FinnOne enterprise lending platform (Java, Spring Boot, Oracle SQL).
- Owned on-site solution delivery and pilot support at State Bank of India headquarters, working with stakeholders to take both mobile apps from pilot to production.

SKILLS

Leadership & architecture: Technical leadership, Solutions architecture, Multi-provider AI architecture, Product strategy, Client & stakeholder delivery, Mentoring engineers

Agentic AI: AI agents, LangGraph, LangChain, CrewAI, MCP, Multi-agent orchestration

Retrieval & Document AI: Milvus, Chroma, Neo4j, Page-level citations, Multilingual OCR, Clause extraction

Evaluation & reliability: Agent evals, Regression suites, Confidence scoring, Human-in-the-loop, LangSmith, OpenTelemetry

Machine learning: PyTorch, TensorFlow, Keras, Transformers, CNN, LSTM, OpenCV

Full-stack: Python, FastAPI, Node.js, TypeScript, React, Next.js, SSE streaming, Electron

Data: PostgreSQL, MongoDB, Supabase, Redis, Firestore, SQL Server, Oracle

Cloud & DevOps: AWS, Kubernetes / GKE, Azure, Docker, Vercel, CI/CD
